

Lightbox Activity Acrylic Clever Cups

Product Notes

www.tts-shopping.com

- These cups can be used in a variety of ways. They look great illuminated on a light panel and could also be used on other surfaces.
- Let the children explore the cups and discover their properties. They can rest, stack, line them up etc.
- Try balancing the cups to make structures. How tall can you make a tower?
- We found that some of the children liked to build the cups and line them up repeatedly, depending on their schematic interests. Some of the children liked to place small objects under the cups. Provide objects that are engaging on a light panel and reflect on the surface.
- Use the cups to make sequence/patterns on a light panel. Order them eg. Red, green, red, green etc.
- Provide tweezers, spoons etc. to place objects in the cups. They could sort depending on attributes eg. all the buttons in one cup, all the counters in another cup etc. By providing spoons you can help develop their fine motor skills.
