

## Light Up Twist and Turn Cog Board

### **Product Code: EY10971**

Children will love interacting and making discoveries with this wooden board with cogs that light up and change colour when rotated. Delight in turning the cogs in different directions and seeing the colours transform. A great way to incorporate fine motor skills and hand-eye coordination with ICT. Children will be fascinated with these whirring cogs and seeing how their actions cause the lights to glow. A great stimulus-response resource and a way of developing early ICT skills away from screens.

- This wonderful cog board can be attached to a wall, used on table tops and on the floor. Children can explore the different coloured cogs attached to the board, the tiny little stars and the jewels.
- With the handle children can rotate the cogs round and round, subtly changing the colours. They may discover that if you rotate in the opposite direction it creates different colours.
- This illuminating board encourages children to develop their motor skills as they grasp the handle to rotate.
- Children are learning their early ICT skills as they spin the cogs the lights turn on and illuminate promoting stimulus-response and cause and effect.
- Imagine placing this board in a darkened sensory environment for children to explore. Once the child has begun to spin the cogs they will illuminate.
- Why not use this alongside the Switch and Press Fine Motor Board to offer children a variety of ways to develop children's motor skills whilst supporting their early ICT knowledge.
