

Tonal Activity Workstation Unit

Product Code: EY11611

A low level accessible unit to enhance children's play. With four open storage areas for children to independently access and self-select their resources. Children can use this workstation as a play space and use the mirror as an extension of their play.

- The Tonal Activity Workstation Unit has a mirror so children can explore reflections and colour. Children can explore on the unit whilst observing the reflections created. It offers opportunities for children to explore symmetry.
- This unit works beautifully alongside the Shades of Tonal Soft Blocks (EY11082, EY11083, EY11084, EY11085, EY11086, EY11087, EY11088, EY11089, EY11608) as they fit snugly inside the little cubby holes. Children can explore colour and tones on this practical workstation.
- This unit also works together with the Shades of Wooden Tonal Collection (EY11120, EY11121, EY11122, EY11123, EY11124, EY11125, EY11126, EY11127). Children can independently explore these beautiful wooden, open-ended pieces. With the mirror and workstation top children can explore and further their imagination when interacting with these tonal pieces. Perhaps they may create a green fairy world or a blue under the sea world.
- You may want to provide children with a variety of different loose parts to independently access from the unit. Perhaps you may have a variety of different bricks and blocks, planks and channelling for the children to self-access.
- You could use this unit for different themes. Perhaps you are looking more closely at a particular season such as autumn. Why not talk the children out (risk assess) on an autumn artefact hunt. Perhaps you may find conkers, acorns and pinecones. You can use this versatile unit to place all the different items the children have found so that they can continuously access them and explore.
