Glow, Stack and Build Texture Tower

Product Code: EY10435

This is a fantastic ICT resource designed to meet younger children's sense of curiosity and exploration. The ICT element means that they illuminate when moved. This is great for cause and effect and helping children make connections. They have a useful docking station so children can automatically place the rings back in their position. The rings also have different textures and colours.

Here are a few ways you might find children playing with them as well as a few suggestions.

- Explore them together. Play I wonder what will happen if I move it? (It will light up). Create a sense of awe and wonder as the rings illuminate.
- Some children will simply enjoy building the rings up into a tower, whilst others may line them up. Some children may love to roll them. This may all relate to their schematic interests.
- The rings can be placed onto the wooden pole (sold separately EY10917). The children may find this really satisfying and repeat the process over and over again.
- Look at the different textures together. Compare and contrast them, using descriptive language.
- Perhaps the rings could be used with other resources. They may incorporate them into their construction activities.
- Place voiles over the rings. Does the colour shine through?
