Cleaning and Safe Transport Guide

Cleaning Kitt

Kitt and his cleaning cap are made from antimicrobial plastic. This means that his body includes an active ingredient which makes it effective against microbial growth such as mould, mildew and bacteria.

It is recommended that for surface cleaning Kitt is wiped clean with a soft damp cloth. Kitt must not be sprayed directly or submerged in water.

When cleaning Kitt please ensure that his teal cleaning cap is securely attached to prevent water damage to his charging port and switches.

Kitt's teal cleaning cap can be hand washed and air dried if required. Please do not soak the silicone cleaning cap for extended periods or use boiling water as this can cause damage to the silicone.

Do not aggressively clean the transparent plastic over his face and camera, as this could result in clouded photos.

Docking Station

- Kitt's docking station can be wiped clean with a soft dry cloth.

- Kitt's clothing can be machine washed at 30 degrees.
- Kitt's carry case can be wiped clean with a damp cloth.
- Kitt's whiteboards can be cleaned with whiteboard cleaning solution.

Transporting Kitt

Kitt can be safely transported between home and school in his Kitt carry case or his original packaging.

Please be mindful not to place heavy objects on top of Kitt or place him in a location that could become wet.

Do not place him in a school or book bag without protection. Always be mindful to protect Kitt's face and camera when in transit.
