

## Lightbox Regular Acrylic Shapes

**Product Code: EY10067**

Place the shapes on the illuminated surfaces. The children can then create different patterns, sequences and shapes. You may wish to make your own cards for the children to match the shapes to. They could make sequence patterns and then continue it. You may find that the children do not need stimuli for making their own pictures and that they select the shapes and create a wide range of interesting animals, vehicles, castles etc. By working on an illuminated surface you add extra engagement to learning about shapes.

You may ask the children to sort them by colour or by shape. How many shapes have four sides? Can you find me a shape with 3 sides?
