

# Wooden Twist and Turn Towers

## **Product Code: EY10446**

This beautiful Wooden Twist and Turn Tower is perfect for developing young children's fine motor skills. Children will love discovering how things work. They will be able to rotate the discs and see how they can be manipulated.

- Children will be developing their fine motor skills by working out how to spin and twist the cogs onto the holder. Children will spend lots of time working out how to twist the cogs and move them up and down the pole. This is a perfect resource for developing hand-eye coordination and manipulate positioning.
- Perhaps children with an interest in a rotational schema may enjoy this resource. Children will love spinning the different shapes and being able to move them up and down the pole.
- You could have this as part of your construction area. Children can use this in their creations. Maybe this is part of an alien space craft and you need to twist the shapes to make the engine start.
- With the chunky shapes and grooved pole children will be developing their concentration skills, helping them to develop their thinking skills.
- Take turns with the child to twist and turn a shape onto the tower. Allow children to empty the tower to start all over again and repeat.
