

Water Bowl Cascade Unit

Product Code: EY10049

- This is an open-ended, versatile resource that the children can use with a variety of containers and utensils. Encourage the children to make discoveries and to experiment and explore. Enable the children to empty, transfer, fill and pour. Have a wide range of receptacles from jugs, pans, buckets, and bowls etc., made from different materials and in different sizes for the children to incorporate into the play.
- Access to water is key as the children need to be able to fill their chosen containers.
- Incorporate channelling into the play so that the children can design, create and engineer water pathways.
- The children will learn about cause and effect. If they tip the bowl one way where will the water go? How can they catch the water? How can they make it go into the channel?
- For some children the enjoyment may simply be emptying and filling and seeing the water pour out. They may have specific schematic behaviour interests and this could be aligned to them.
