

Maths Measuring Bottles

Product Codes: EY10026, EY10343 – (Large and Small)

These bottles are really appealing as they are in bright colours and have a jewel like top. They have the appearance of glass but are made from a robust plastic.

- The bottles have the marks on the side showing quarter, half, full etc. This is great for supporting play experiences relating to capacity and volume. The children can empty and fill the containers with liquids. They can see how many times they have to fill the large bottles with the smaller ones.
- Ideal for water and sand activities as well as messy play. Encourage mathematical language to be used in the mud kitchen eg. more, empty, full, quarter etc.
- The children may use a completely different way to what you have planned. They may get taken into the home corner, the shop role play area etc.
